ELLIOTT'S BOWLING GREEN

We have selected for this mixture grasses which will produce a hardy, close turf, permitting of close mowing and much hard wear, yet attaining a rich velvety appearance. Recommended for Croquet Lawns, Bowling Greens and, in fact, all situations where a fine lawn is required to withstand very hard wear. Price, qt. 30 cts., pk. $1.75, bush. of 20 lbs. $6.00.

ELLIOTT'S TERRACE MIXTURE

A combination of grasses, producing strong spreading roots suitable for terrace, embankments, etc , withstanding drought, thriving in shallow soils and preventing washing out by heavy rains, yet producing a rich velvety turf throughout the season. ELLIOTT'S SHADY NOOK

Usually it is quite difficult to obtain a satisfactory growth of grass under trees and in shady places ; for sowing in such places we recommend the use of this special mixture. It will quickly produce an abundant and even growth of beautiful green grass. The grasses used in making this special mixture are only those that are well adapted for growing in shade. It has been successfully used on some large operations where a green sward was desired on land partially shaded by old trees. Price, qt. 30 cts., pk. $1.75, bush. of 20 lbs. $6.00.

ELLIOTT'S EMERALD

is carefully compounded of grasses which ripen successively, thereby retaining their green appearance. For various soil conditions this mixture is well suited, giving good results, even in small city grass plots, where the soil is generally stiff and heavy. It is also valuable for use on railroad embankments, terraces and exposed lawns, also for renovating old worn-out lawns, and re-seeding bare places. Price, pk. $1.00, bush. of 16 lbs. **$4.00.**

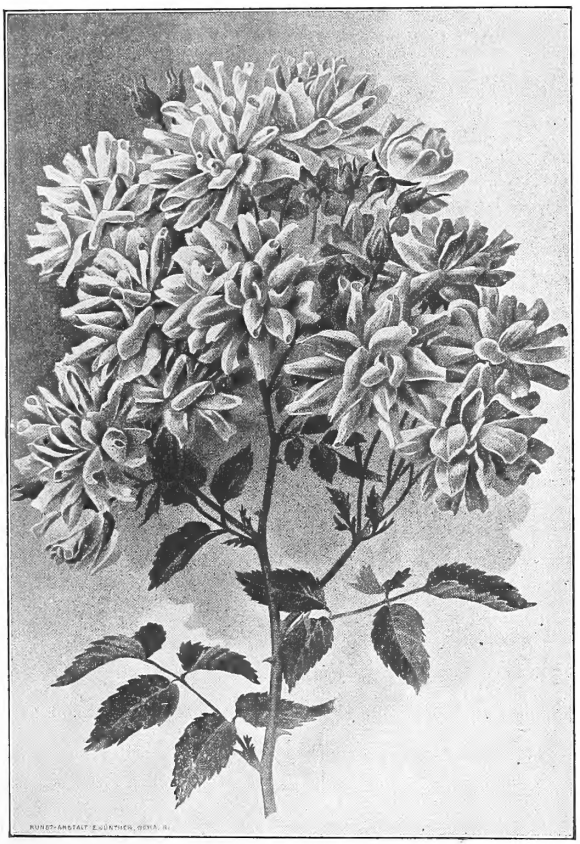
PINK BABY RAMBLER ROSE

This is a cross between "Crimson Rambler" and "George Pernet," growing 18 ins. high and resembling in general habit the now so well-known Crimson Baby Rambler. The flowers are also produced continually in the same profusion and are of a brilliant rose color. It is a true everbloomer and exceedingly useful for either pots or the open ground. 25 cts. each.



NEW CLIMBING ROSE "LADY GAY"

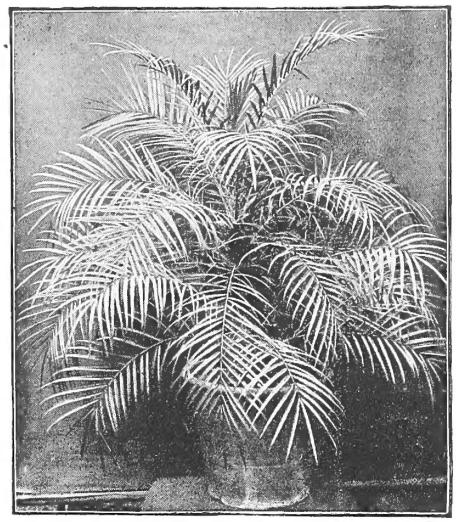
In this latest introduction we have a seedling of the Crimson Rambler that marks the highest perfection of hardy pink climbing roses. It is of a different growth and a distinctly different shade of pink from the "Dorothy Perkins," which it resembles only in being a pink climber. We feel justified in strongly recommending this variety, feeling confident it will give entire satisfaction. 35 cts. each

CRIMSON BABY RAMBLER ROSE

A direct descendant and of the same color as that grand old favorite "Crimson Rambler," this popular pet attains a height of but twenty inches when fully grown. From the time that it is in the cutting bench, the tiny plant commences to bloom, and there is not a day in the year when it will not produce with wonderful freedom flowers fully the equal, if not the superior, of Crimson Rambler in large panicles, many of them having over a hundred blooms in a cluster. Strong plants, 25 cts. each; extra strong size, 40 cts. each; large field grown plant, 75 cts. each. Mailed at these prices.

PHOENIX ROEBELINI

The newest and in every respect the finest and most beautiful palm grown. It has the graceful and beautiful foliage of Cocos Weddeliana, but ten times as much of it, and it is the hardiest and most easily grown of all palms, and just the one that will succeed admirably in any window. Nothing can surpass it as a decorative plant. Strong well-rooted plants 3 to 4 leaves, 8 to 10 ins. high, by mail, 50 cts. each; larger plants, 4-in. pots, by express, only $3.00 each.



SALVIA SPLENDENS COMPACTA "ZURICH"

This new variety originated with the park department of Zurich, Switzerland, and received many flattering notices during the past summer. It is of the dwarfest habit, never exceeding 18 inches in height, and produces its flowers of the brightest scarlet in great profusion. Pkt. 25 cts.; plants 15 cts. each, $1.50 per dozen. *Ready in April.*

GIANT-FLOWERED JAPANESE IRIS

In these we have combinations of form and colors far excelling any other type of Iris. They are of easy culture, requiring very little attention after once being planted. They do best in a light, rich, moist soil and sunny situation and require a liberal supply of water when growing. Choicest varieties in mixture, 20 cts. each; $2.00 per dozen.

NEW HARDY ROSE "SOLEIL D'OR"

(Golden Sun)

An entirely new type of Rose—a cross between Persian Yellow and Antoine Ducher. It is perfectly hardy, with large, full, globular flowers, varying in color from gold and orange to reddish gold, shaded with nasturtium-red. Strong two-year-old plants, 50 cts. each; $5.00 per dozen.

RAMANAS OR RUGOSA ROSES

The lovely Ramanas or Rugosa Roses form sturdy bushes 3 to 5 feet in height, covered with handsome glossy green foliage and clusters of beautiful single flowers, which emit a delightful odor. They bloom nearly the whole summer, and are equally as attractive during the autumn and winter when covered with their large, brilliant red seedpods. Of healthy, vigorous growth and not troubled with insects or fungus pests, and equally desirable alike as single specimens or for making a hedge.

Rugosa. Glossy crimson. | **Rugosa Alba.** Pure white.

Elliott's Leviathan

The largest Cabbage Lettuce in cultivation, and besides is possessed of many merits that place it in the front rank of desirable varieties. When Seeds in bulk are ordered by mail, postage must be added to catalogue prices at the rate of 8 cts. per pound on half-pound or over, 15 cts. per qt. for peas and beans, and 10 cts. per qt. for corn.

Unless postage is sent with mail orders for these items we shall be obliged to reduce quantities to make up the deficiency.

ARTICHOKE

ARTICHAUT. *Alcachofa.* Artischocke.

One ounce will sow 100 ft. of row, and produce about 500 plants.

A deep, rich, sandy loam is best adapted for this plant. The seed should be sown thinly in drills 1½ inches deep and one foot apart. When large enough, transplant to permanent rows 3 feet apart, allowing two feet between the plants. They reach maturity the second year, and in the northern States should be protected in winter by a covering of leaves or coarse manure. A bed will continue in bearing for several years.

Improved Large Green Globe. Heads large, fleshy, and of rich flavor. Pkt. 5 cts., oz. 30 cts., lb. $3.00.

Jerusalem. Distinct from the above. Grown for the tubers, which resemble potatoes, and are cultivated in a similar manner, but the rows should be at least four feet apart. Qt. 20 cts., pk. $1.25, bush. $4.00; 2 lbs., by mail, 50 cts.

ASPARAGUS

ASPERGE. *Esparrago.* Spargel.

One ounce will sow 50 ft. of row, and produce about 1,200 plants.

Sow the seed as early in spring as the soil can be worked, in drills 12 to 14 inches apart, and when well started thin out to three inches apart. When one or two years old, transplant into permanent beds, thoroughly trenched, two feet or more in depth. Set the plants in rows two feet apart and not less than 18 inches apart in the row. Care should be taken that the roots are well spread, and set at a depth of six inches below the level of the bed. Cover only two or three inches, and fill in gradually as the plants grow. Very little, if any, should be cut the first year after transplanting, but a fair crop can be cut the second year. Every fall after the tops have been cut down apply a dressing of coarse manure, and in the spring fork it in. An occasional top dressing of salt at the rate of one-half pound per square yard is also beneficial, and keeps down the weeds.

Columbian Mammoth White. The stalks are very large, clear white, and remain so as long as fit for use. Pkt. 5 cts., oz. 10 cts., ¼ lb. 20 cts., lb. 50 cts.

Conover's Colossal. The standard variety. Pkt. 5 cts., oz. 10 cts., ¼ lb. 20 cts., lb. 50 cts.

Palmetto. A large early variety, of a deep green color. More regular and even in size than any other variety. Pkt. 5 cts., oz. 10 cts., ¼ lb. 20 cts., lb. 50 cts.

ASPARAGUS ROOTS

A saving of one or two years is effected by planting roots. A bed 12 by 40 feet, requiring about 100 roots, should give a sufficient supply for an ordinary family. If planted in rows three feet apart and two feet between the plants, 7,260 roots will plant an acre. As nothing is gained by using one-year-old plants, we offer only strong two-year-old roots. If ordered by mail, postage must be added at the rate of 50 cts. per 100 to the following prices:

All Roots are Two Years Old

Columbia Mammoth White. Per 50 50 cts., 100 90 cts., 1000 $6.00.

CARROTS

CAROTTE. *Zanahoria.* Möhren.

One ounce will sow 100 feet of row; 2 to 3 pounds required for an acre.

Improved Long Orange Carrot

Avoid sowing on newly manured ground, which has a tendency to produce forked roots; the land should, therefore, be manured the previous season. For early crops sow as soon as the ground can be worked, and for later crops from the beginning until the end of May, in rows 15 inches apart and ½ inch deep. Thin out the young plants to 5 inches, and keep the surface open by a frequent use of the hoe.

For field culture, sow in drills from 20 to 30 inches apart, and when plants are 1 to 2 inches high, thin out to from 4 to 8 inches apart in the rows. An important feature in sowing carrots, as in all other seeds, is firming the seed in the soil; this may be done with foot or spade.

If to be forwarded by mail, add at the rate of 8 cts. per lb. for postage.

CAULIFLOWER

CHOU-FLEUR. *Coliflor.* Blumenkohl.

One ounce will sow a bed of 40 square feet, producing 2,000 plants.

This crop will grow in any soil that suits cabbage. Sow the seed in a hotbed in January or February, and when the plants are large enough transplant 3 inches apart in boxes or hotbeds until time to plant out. If hardened off they are seldom injured by planting out as early as the ground can be properly prepared. Set in rows 2 feet apart and 2 feet between the rows. Keep them well hoed, and bring the earth gradually up to the stems, watering freely in dry weather, and especially when they begin to head. Cauliflower will not head in hot, dry weather, therefore planting should be regulated so that it will head early in summer or autumn.

Water Cress may be grown in any moist situation, but more successfully by the edge of a running brook. The seed may be sown in May, on the ground where it is intended to be grown, and the thinnings transplanted. The plants should be set not less than a foot apart. The cress will be fit for gathering the second year. Pkt. 10 cts., oz. 30 cts., ¼ lb. $1.00, lb. $3.00.

CELERY

CELERI. *Apio.* Sellerie.

One ounce will sow about 300 feet of a row and produces about 5,000 plants.

Sow in the open border early in April in rich ground, pressing the seed down rather than covering with soil. When the plants are 3 inches high, transplant 4 inches apart into temporary beds of soft, rich soil until they acquire sufficient strength for planting out. If they grow too quickly before needed for planting out, shear the tops off when about 4 inches in height, and they will grow more stocky. Plant in rows 3 feet apart, and set 8 inches apart in the rows. After the planting is completed, nothing further is necessary for six or seven weeks, except running through between the rows with the cultivator or hoe, and freeing the plants from weeds. About the middle of August earthing up is necessary for blanching and whitening of that which is wanted for early use. After the soil has been drawn up against the plant with the hoe, it is further pressed close around each plant by the hand, firm enough to keep the leaves upright and prevent them from spreading, using care to prevent the soil falling into the heart of the plant.

LETTUCE

LAITUE. *Lechuga.* Salat.

One ounce will sow 300 feet of row; 3 pounds will plant one acre in rows 3 feet apart.

For early plants, the seed may be sown in September, and transplanted into cold frames for protection during the winter; or sow in February or March in hotbeds with a moderate bottom heat, cover lightly, and thin sufficiently to prevent crowding; gradually harden by exposure. Transplant in the open ground in a sheltered location in April; set in rows a foot apart, and 6 inches apart in the row. When heads begin to form, thin out by using alternate plants in the rows. For succession sow in prepared beds as soon as the ground can be worked, and at intervals of two weeks during the summer. To be crisp and tender, its growth should be vigorous and rapid, which requires rich soil, plenty of well-rotted manure and an abundance of moisture.

MELON MUSCACE. *Melon Muscatel.* Cantalupe.

One ounce will plant 80 hills; three pounds is required for one acre.

Melons should be planted on a rather light, rich, sandy loam. The middle of May is early enough for planting in open ground. Make hills about six feet apart each way, put in each a good shovelful of well-composted manure; press it down and cover with earth. Upon each hill plant six to twelve seeds about ½ inch deep. When up, and all danger of insects has passed, pull out all but three plants. Cultivate until the vines cover the ground, and pinch the ends off the growing shoots to induce early fruiting. Slug shot or tobacco dust is excellent to sift over the young plants when the dew is on to prevent attacks of insects. A few hills for early use may be had by sowing in hotbed on pieces of sod or in pots. The seed may also be started outdoors under hand-frames or glasses.

If to be forwarded by mail, add at the rate of 8 cts. per pound for postage.

For early crops the seed may be sown in a hotbed in March; and for general crops at frequent intervals through the spring, in drills, from 8 to 12 inches apart.

ELLIOTT'S SURE-CROP MUSHROOM SPAWN

Ten pounds will spawn about 10 feet square.

Mushroom beds may be made in a warm, dry cellar, or in any building where the frost does not penetrate, and in the open air during the summer and fall months. Having procured the spawn, the next thing to be attended to is to make preparations for the beds. About a fortnight or three weeks before the beds are to be made, collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to your requirements, say three feet wide, ten feet long, and from two to three feet deep; beat it well down with the back of the spade as the process of building goes on. When the bed has been made some time, say a week or thereabouts, and the heat sufficiently declined to a temperature of 65 or 75 degrees, the spawn may be put into it. Break the spawn in pieces two inches square, and put them six inches apart, all over the bed, then cover the bed with two inches of rich soil, the stronger the better, but of a loamy quality, beating it down firmly with a spade. The soil used for this purpose should be in a pliable condition, and not too wet or over-dry. Cover the bed with a foot of dried straw or hay; examine once a week to see if the manure is not heated while in this condition; if so, it will destroy the spawn, and necessitate spawning a second time. If everything goes on well, you may expect Mushrooms in about five or six weeks. When the soil looks dry, give a gentle watering with tepid water, using a rose on the watering-pot. If the beds are made out-of-doors, protect them from rain by covering them with shutters or sashes. Good crops of mushrooms can be obtained by spawning the hotbeds in spring. They can also be raised in pots, boxes, or anything capable of keeping the materials together, and placed in a cellar, closet or greenhouse. We have on hand a choice lot of English and French spawn.

ONIONS

OIGNON. *Cebolla.* Zwiebel.

One ounce will sow 100 feet of row; 5 pounds is required for one acre.

For Onion culture the ground should be prepared the previous autumn by plowing or spading deeply, using plenty of well-rotted barnyard manure. A rather strong, deep, rich loamy soil is considered most suitable, although we have seen splendid crops raised from a stiff clay soil, which was well under-drained. Sow the seed as early in spring as practicable, in shallow drills 1 foot apart, covering with fine soil, which should be pressed down by the use of a light roller or the back of a spade. When the young plants are strong enough thin out to 4 inches apart. Keep the surface of the ground open and free from weeds by hoeing frequently.

One quart will plant 100 ft. of row; two bushels will plant one acre in rows 3 ft. apart.

Peas luxuriate in a free, light, rather rich soil, abounding with vegetable matter. Those growing over 2½ feet in height should be supported with brush. Market gardeners will be supplied by the bushel at low rates. Large consumers will please write for prices.

If to be forwarded by mail, add 15 cts. per quart for postage.

Herbs for Culinary and Medicinal Use

Herbs should have a place in every garden. Any good housekeeper knows the value of the little patch of herbs upon which she makes daily drafts in the summer, and which furnishes such a nice collection of dried herbs for winter seasoning, while as domestic medicines several kinds are held in high repute. The culture is very simple; the best way is to make a little seed-bed in the early spring, and set the plants out in a bed as soon as large enough. They should be harvested on a dry day, just before the blossom develops, dried quickly and bottled, or closely packed in dry boxes with the air entirely excluded.

ASTERS

The Aster's vigor and ease of culture are important factors of its popularity. Plants from seed sown in the open ground in May bloom finely in September and October, when the flowers are seen at their best. For July and August flowers sow in March or April, in cold frame, spent hotbed, or pots or boxes in the house. Cover the seed about half an inch deep with rich, light soil, and when the plants have three or four leaves transplant about 18 inches apart each way into well-prepared beds. Manures too fresh or used in too large large quantities sometimes induce disease in Asters. When used they should be thoroughly well decayed and mixed with the soil.

New Miniature Asters, Waldersee

MANY-FLOWERED

This new type forms compact globular bushes eight to ten inches high by eight to ten inches in diameter. They branch densely, are well furnished with small, deep green foliage, and resemble, before flowering, little mounds of well-kept box, thus rendering them of exceptional value for garden edgings even before blooming; but when in flower the effect is truly beautiful. When grown in pots they make pretty specimens. Rose-pink edged blush. Pkt. 10c.

Late Flowering Branching Asters

These are, without a doubt, the finest of late flowering varieties. The flowers are large, very double, aud borne on long stems; fine for cutting. Two feet.

Moonflower

NASTURTIUMS

TOM THUMB, OR DWARF VARIETIES

A marvelous range of new colors has been developed in this favorite flower, which for three or four months of the season makes a better display than almost any other plant. No other annual will produce such a lavish profusion of flowers for so long a time with the same small outlay of time and labor. The maximum of bloom is produced in thin soils, and never flags through the hottest weather. In soils too rich leaves predominate, and the plants are apt to rot off in wet weather, especially if standing too close. Plant the seeds an inch deep, and thin seedlings to 10 or 12 inches apart.

Sunflower Cucumerifolius

SWEET PEAS—UP-TO-DATE

A deep, rich, moist soil is best suited to Sweet Peas. They are usually grown in double rows, with a wire trellis or a row of brush between. For each double row make the drills about five inches deep, and nine or ten inches apart. Sow plentifully, covering about two inches deep, and by degrees, as the vines grow up, fill the trenches with soil. Spring sowings should be made just as early as the ground can be prepared; frost does not hurt the little seedlings. The earliest flowers are from seed sown in the fall, preferably in a dry situation, and four or five inches deep, giving them level culture. As fertilizer, a liberal use of bone meal worked into the soil will give excellent results.

Prices for all named varieties, except where noted: Pkt. 5 cts., oz. 10 cts., 1-4 lb. 25 cts., postpaid.

Creeping Bent, or Fiorin (*Agrostis stolonifera*). Desirable for mixing with other lawn or pasture grasses, as it thrives in moist land on which water does not stagnate. (15 lbs. per bus.) Lb. 28 cts., 100 lbs. $25, bus. $5.25.

Crested Dog's Tail (*Cynosurus cristatus*). Should enter in moderate quantity in permanent pasture mixtures, and in larger quantities for lawns, as it possesses, in a marked degree, all the desirable features of a good lawn grass. (21 lbs. per bus.) Lb. 50 cts., 100 lbs. $45, bus. $8.50.

Fowl Meadow Grass (*Poa serotina*). Suitable for low, moist land. May be mowed any time from July to October. Cattle and sheep are fond of it. Succeeds best when mixed with other grasses. (12 lbs. per bus.) Lb. 35 cts., 100 lbs. $30, bus. $4.

Kentucky Blue Grass (*Poa pratensis*). This is the most nutritious, hardy and valuable of all northern grasses. In conjunction with white clover, it forms a splendid lawn; for this purpose use four bushels of Blue Grass and six pounds of White Clover per acre. If sown by itself for pasturage, about 45 pounds per acre will be required. (14 lbs. per bus.) Lb. 30 cts., 100 lbs. $28, bus. $3.50.

Meadow Fescue, or English Blue Grass (*Festuca pratensis*). This is an excellent grass, of great value in mixtures for permanent pastures; productive and nutritious. (22 lbs. per bus.) Lb. 16 cts., 100 lbs. $14, bus. $3.25.

Orchard Grass (*Dactylis glomerata*). One of the very best pasture grasses, as it is exceedingly palatable to stock, and will endure a good deal of cropping; particularly adapted for growing in shady, moist places or under trees. (14 lbs. per bus.) Lb. 22 cts., 100 lbs. $20, bus. $2.75.

Perennial Rye Grass (*Lolium perenne*). Valuable for permanent pasture, in mixture with other pasture grasses, as it adapts itself to a great diversity of soils; producing a strong, verdant growth four or five weeks after sowing. (24 lbs. per bus.) Lb. 12 cts., 100 lbs. $9, bus. $2.

Rough-Stalked Meadow Grass (*Poa trivialis*). A spreading, thickly matting, stoloniferous-rooted species, forming a fine turf, and well adapted for the more shaded portions of lawns. Timothy (*Phleum pratense*). A field and not a pasture grass, as it will not endure close and frequent cropping; but for a hay crop on strong soils it will produce more than any other sort. (45 lbs. per bus.) Lb. 12 cts., bus. $4.

Wood Meadow Grass (*Poa nemoralis*). Specially adapted for shaded positions in lawns or under trees. Much relished by cattle, and highly nutritious; produces a thick growth, and should be included in mixtures for permanent pastures. (14 lbs. per bus.) Lb. 50 cts., 100 lbs. $45, bus. $6.50.

Yellow Trefoil (*Medicago lupulina*). May be cultivated either alone or with other grasses. Requires about the same treatment and soil as Red Clover, although thriving in dry and inferior soils. Japan Clover (*Lespedeza striata*). A low perennial grass of spreading habit. It flourishes on the poorest soils, and is valuable only in the South, as it is not hardy north of Virginia. Lb. 30 cts., 100 lbs. $25.

Elliott's Finest Mixtures of Grass Seeds for Hay and Permanent Pasture

We prepare special mixtures containing only the most suitable grasses for permanent pastures and meadow lands, such as Orchard Grass, Meadow Foxtail, Sheep's Fescue, Rhode Island Bent, Meadow Fescue, English Rye Grass, Perennial Sweet Vernal and Red-Top in such proportions as will insure the most satisfactory results, producing the heaviest possible crops of hay, far superior to seeding with Timothy and Clover alone, and for permanent pastures allowing of the closest grazing without injury. On ordinary fertile soil sow three bushels per acre; where the soil is poor larger quantities are required.

$3.00 per bushel

With the above should be sown ten pounds of mixed Clovers per acre (which cost about 20 cts. per pound). On account of the greater weight of Clovers they should be sown separately and only in the spring, as they are inclined to winter-kill unless well established.

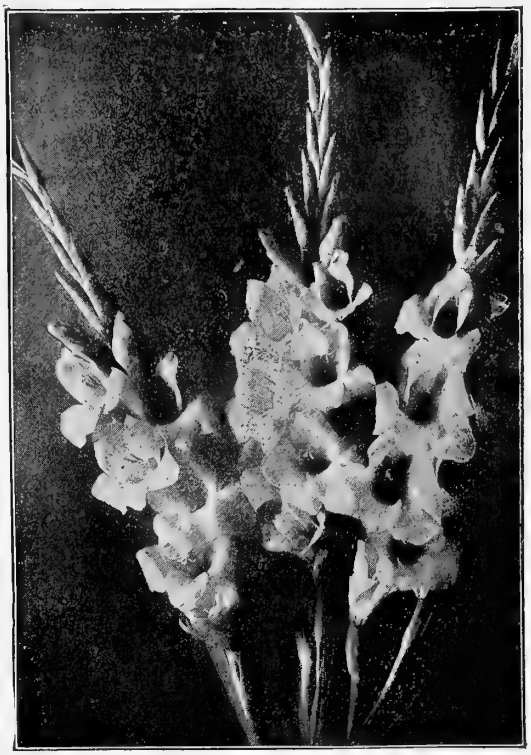
SUMMER-FLOWERING BULBS AND PLANTS

GLADIOLI

The Grand New Pink Gladiolus "AMERICA"

The most beautiful gladiolus yet introduced; spikes two to three feet long, erect with a great number of spreading blossoms of a color the delicacy and beauty of which it is impossible to describe or reproduce. It is an exquisite soft lavender pink, very light, almost a tinted white, approaching closely the marvelous shading seen only in an orchid. As a cut flower, it lasts in water a week or more, the great blossoms retaining full size and delicate coloring. Strong flowering bulbs, 20 cts. each, $2.00 per dozen.



Gladiolus, America

HOW TO GROW GLADIOLI

They succeed in any ordinary garden soil and will repay any care in cultivation bestowed on them. The ground should be liberally enriched and dug over to a depth of fifteen to eighteen inches. Plant in the open garden from April until June, setting the bulbs seven or eight inches apart and about four inches deep. By planting at intervals up to the first of July, bloom can be had all through the summer and fall. About the end of October, when the leaves begin to wither, the bulbs should be taken up, dried in the open air and stored in a dry place, free from frost, until planting time the next season.

ROSES

HYBRID PERPETUAL VARIETIES

Roses of this class produce the largest and most beautiful flowers, and the varieties offered below are all thoroughly hardy. Some sorts do not bloom until the second year, but when thoroughly established they bloom very freely at the usual season, June and July, and at intervals throughout the balance of the summer and fall. They should invariably be planted in the open ground, being adapted for outdoor cultivation rather than for house culture. They will stand a considerable amount of hardship and neglect but improve greatly with good cultivation and rich soil. The quantity and size of blooms will be greatly increased by severe pruning each spring. All rough and scragly wood should be cut away entirely and the other shoots should be cut back enough so as to leave only two or three eyes to grow.

Two-year-old plants 40 cts. each, $4.00 per doz., by express, at purchaser's expense.

HARDY CLIMBING ROSES

The Four Best Rambler Roses

Two-year-old plants 50 cts. each, $5.00 per doz.

In the race for popularity no Rose has ever made such a wonderful record as the Crimson Rambler, which has now been on the market for over 10 years, and is likely to remain at the head of the list of hardy climbing Roses. The other Rambler varieties are described in some catalogues as counterparts of the Crimson, except in color, but they will not bear such close comparison, as their flowers lack quality and finish. They are, however, entirely distinct and excellent Roses, and deserve a place in every garden.

Crimson Rambler. A vigorous grower and when in bloom commands admiration by the gorgeous display of its brilliant crimson clusters of blossoms. It is perfectly hardy in all parts of the country.

Pink Rambler (Euphrosyne). This Rose is as charming as any of its rivals, embracing all their good qualities of hardiness, vigorous growth, profuse blooming and delightful fragrance.

White Rambler (Thalia). This charming new Rose climbs rapidly, is entirely hardy, produces immense clusters of pure white flowers, perfectly double and of delightful fragrance.

Yellow Rambler (Aglaia). The only hardy yellow climbing Rose in cultivation, and as such, is almost indispensable. It is identical with Crimson Rambler, except flowers, which are deep golden yellow and very fragrant.

Hardy Perennial Plants and Bulbs

Anemone, "Whirlwind." (Japanese Windflowers.)

No home ground is complete without a collection of hardy perennial plants and bulbs; and the demand for these is increasing wonderfully with every succeeding season. By proper selection, one may have flowers in abundance from April to November, and a pleasing picture by proper arrangement for color effect. The plants may be arranged in formal designs or along the shrubbery border. They bloom so freely that one may cut and come again, and are so easily grown that anyone may succeed with them. Moreover, the cost need deter no one from having a choice selection, since the plants are permanent, and once planted remain from year to year with but little care and hardly any winter protection in our climate. The list offered below has been carefully selected and comprises only varieties of real merit.

Achillea **"THE PEARL." The great Cemetery Plant**—A single plant of Achillea will produce hundreds of flowers the first season, but when well established they frequently have more than five hundred perfect flowers on the plant at one time. It commences to bloom early in July, and is a perfect mass of beautiful pure white double flowers during the balance of the season. The flowers are produced in large sprays, making it fine for cut-flowers. 1½ ft. Each, 15c.; doz., $1.50.

Anemone **WHIRLWIND**—A new double white Anemone. Very hardy and the blooms are quite lasting; flowers 2½ to 3 inches across; very free bloomer and one of the prettiest of this class of plants. 2 ft. Each, 15c.; doz., $1.50.

QUEEN CHARLOTTE—A very fine Japanese sort; flowers semi-double and a beautiful shade of pink. 2 ft. Each, 15c.; doz., $1.50.

Aquilegia **COERULEA (Rocky Mountain Columbine)**—One of the very best of the whole family; blue and white. 1¼ ft. Each, 15c.; doz., $1.50.

Bleeding Heart **(Dielytra Spectabilis)**—Pretty spring bloomers, with graceful, drooping sprays of heart-shaped pink and white flowers; very ornamental and bloom freely throughout the season. 2 ft. Each, 20c.; doz., $2.00.

Campanula **(Canterbury Bells)**—Showy flowers, mostly in blue. Easy to grow; in bloom a long time.

Calycanthema (Cup and Saucer)—Large blue, white or purple flowers. 2 ft. Each, 15c.; doz., $1.50.

Persicifolia (Peach Bells)—Produces an abundance of blue salver-shaped flowers during June and July. 2 ft. Each, 15c.; doz., $1.50.

Carnations **Hardy Grenadin**—We have a very nice stock of these free-flowering and fragrant garden Carnations. With a little protection they are hardy everywhere. Flowers very double and large. We can offer you two fine colors—**Scarlet, and White.** Either color, each, 20c.; doz., $2.00.

Chrysanthemums **HARDY POMPONE.**—These fine small flowered varieties are very popular for outdoor bedding; are quite hardy, requiring only a slight covering during winter, and once planted grow better and better for a number of years. They are desirable just at the close of the season, when all other blooming plants are failing then these little "Mums" come out in wonderful profusion and may be gathered by the armful.

Acto—Perfect flowers, incurving petals. Bright rose, with lighter reverse.
Aileen—Deep lilac-pink, compact form.
Arbre de Noel—Orange and red, tipped yellow.
Gallia—Clear soft pink, of excellent form.
Golden Bedder—Clear golden-yellow. Early.
Jules Lagreve—Deep red. Large, fine flower.
Klondike—Brilliant yellow, extra fine.
Miss Ada Williams—White, shaded with blush, slightly laced with violet.
Nita—A beautiful rose-pink; extra fine.
Nydia—Pure white, high rounded flower.
Quinola—Deep, clear orange-yellow.
Rose Trevene—White and pink; very pretty.
Snowdrop—Pure white; very profuse.
Yezo—A globular variety. Blush color.
Zenta—Very bright crimson-maroon.
Price, 10c. each, $1.25 per set of 15.

Coreopsis Lanceolata A beautiful hardy border plant 15 to 18 ins. high; bright golden-yellow flowers in great profusion the entire season. A handsome vase flower for table decoration. Each, 15c.; doz., $1.50.

Digitalis **(Foxglove) Gloxinoides**—A choice garden variety in mixed colors. 3 to 5 ft. Each, 15c.; doz., $1.50.

Funkia **(DAY LILY)**—By some called **Plantain Lily.** A superb autumn flower desirable to plant on the side of lawns or at the edge of shrubbery; succeeds in either sun or shady places. Fine for cemetery.

CORDATA (White Plantain Lily)—A handsome, showy plant with beautiful broad yellowish-green leaves. Its Lily-shaped flowers are waxy-white, very fragrant. Each, 15c.; doz., $1.50.

VARIEGATA—Leaves 8 to 10 inches long, 2 to 3 inches wide, beautifully variegated yellow and green. Flowers deep blue. Each, 15c.; doz., $1.50.

Gaillardia **GRANDIFLORA (Blanket Flower)**—Of all hardy plants the Gaillardia is very satisfactory. Begins to bloom in early summer and continues until after first frosts. Perfectly hardy. Flowers 2 to 3 inches across, with center of brownish-red, while petals are shaded into rings of orange, crimson and red. Stems long; grand for cutting; does well in any soil. Each, 15c.; doz., $1.50.

Gypsophila **(Baby's Breath)**—A very graceful perennial. When in bloom it forms a symmetrical mass of foliage about two feet in height and is completely covered with tiny white flowers, producing a beautiful gauze-like appearance. As a cut flower, especially if used with high-colored blooms, it is exquisite, and some very lovely effects are obtained. Can also be used in winter bouquets. Each, 15c.; doz., $1.50.

Hollyhocks For planting in masses, or as a background for lower growing plants, the Hollyhock cannot be dispensed wtih. Once planted they keep coming up year after year. Each, 15c.; doz., $1.50.

MIXED COLORS, our selection—Very fine mixture. Each, 15c.; doz., $1.50.

ALLEGHENY—We offer a splendid lot of these **New Fringed Double-Flowering Hollyhocks.** Mixed Colors, each, 15c.; doz., $1.50.

Iris Kaempferi The newer varieties of this class are remarkable for their beauty of coloring and stateliness, each spike bearing two to four enormous blossoms, and each plant sending up from ten to twelve spikes. Mixed colors; single or double varieties. Each, 20c.; doz., $2.00.

Larkspur **(DELPHINIUM)**—These old-fashioned flowers are now being used with telling effect in both private and public grounds. About the only blue hardy flower of any note, and have a long season of bloom if seed pods are not allowed to form. Our strain embraces all shades of blue and purple. Each, 15c.; doz., $1.50.

Lobelia **CARDINALIS (Cardinal Flower)**—One of the showiest of hardy flowers; large deep red blossoms from July until September; will thrive in any garden soil, but prefer rich, moist locations. Each, 15c.; doz., $1.50.

Rudbeckia **GOLDEN GLOW**—A grand, good, hardy, herbaceous plant of easy culture. Averages 5 to 6 feet in height and forms large clumps which produce, literally, armfuls of rich, deep golden-yellow flowers on long stems, in beautiful contrast with its rich dark green foliage. Fine for center of beds, or as a background for beds of Scarlet Sage (Salvia) or other scarlet blooming plants. Each, 15c.; doz., $1.50.

The "Suburban," for lawns. Simplicity of construction is the marked feature, there being absolutely nothing to get out of order. The cut illustrates the Suburban No. 1. This style has a "shut off" on one arm, and lock-nut on central bearing, which by turning slightly prevents arms from rotating. The spray can thus be directed to small flower beds, shrubs, etc., from one outlet only. This arrangement also avoids throwing water on sidewalks where lawn area is small. No other Sprinkler has this very desirable adjustment, which will, we feel sure, meet a long-felt want and quick appreciation....	2 00

ELLIOTT'S VICTORY BALL-BEARING LAWN MOWER

The Most Perfectly Constructed and Easiest Running Machine Made

This mower is fitted with **Ball-Bearings**, which reduce the friction astonishingly—even more in a mower than in a bicycle—rendering it easier to operate a 24-inch of this machine than a 16-inch fitted with the old parallel bearings. The gear is entirely enclosed, so that no dirt or cut grass can find its way into the pinions and clog them. The frame cannot be twisted or jarred out of parallel, being bound tightly together by two steel bolts, which make the most rigid frame ever built, and permit of the mower being readily taken apart. The cutter bar is easily removed for sharpening without disturbing the frame. The slight wear of the cones, balls and cases is perfectly compensated for by two screws, while with the parallel bearing six to ten screws are required. The double ratchet is lightning-like in action, consequently the knives cut the instant the mower is moved. The material of which these mowers are constructed is the very best, and only skilled labor and the most approved machinery are employed. **Ball-bearings, 10-inch wheels, triple gear, four-bladed reel.**

The Townsend Horse Lawn Mower

THE TOWNSEND HORSE LAWN MOWER

We consider this the most perfectly constructed Horse Lawn Mower on the market. Triple rolls with triple pawls in each roll, making the most powerful and instantaneous driving mechanism ever put in a Lawn Mower. Unlike other mowers, the motion of the blades is maintained even when turning sharp corners. The height of cut and motion of knives is under perfect control of the driver from his seat, and the large rolls (15 inches in diameter) insure great power and ease of movement. The self-aligning journal boxes will be found in this mower only, and prevent cramping, a very common fault in Horse Lawn Mowers.

All machines are fitted complete with Tool Box, Seat, Handles, Shafts and Side-bar Attachment, which keeps the horse on the cut grass.

Fresh bone contains about 40 per cent. water, 12 per cent. grease—52 per cent. of matter which your fowls do not need or care for, and which also taxes the digestive organs unnecessarily. The granulated bone we offer is made from fresh, green bones, from which the moisture and grease have been extracted, leaving nothing but the phosphates, lime and protein. These are the only food values of bone, green or dry. Bone is especially valuable as an egg-shell producer. A two-ounce sample package mailed on application. 50 lbs. $1.25, 100 lbs. $2.25. Special prices on ton and car lots.

Fine Ground Bone Meal. Bone meal is also made from fresh bones, and is the same stock as the granulated bone, but is reduced through a finer process. It is ground fine and is especially useful to mix with mash food. We recommend it highly for young chicks. Sample package mailed on application. 50 lbs. $1.25, 100 lbs. $2.25. Special prices on ton and car lots.

ELLIOTT'S LAWN DRESSING

A Perfect Food for Lawns and Golf Links

The increasing demand for a Lawn and Golf Dressing that is odorless, safely applied and quick in effect, has compelled us to take up this important matter and give it a close study, which we have done, and we are pleased to state that in the production of **Elliott's Lawn Dressing** we have produced a Lawn and Golf Fertilizer that has no equal, being convenient, portable and clean, inducing a rapid, rich green growth and a most velvety appearance. This preparation is in every way more desirable than manure, avoiding the unsightly litter, disagreeable odor and weed seeds, which cause an endless annoyance. Should be sown broadcast in spring or fall, or may be applied in midsummer without injury to the grass.

Quantity required: 10 pounds for a plot of 300 square feet; 1,000 to 1,500 pounds per acre in preparing new lawn, or one-half to two-thirds the quantity in renovating an old lawn.

Price: 4 lbs., 25 cts.; 10 lbs., 50 cts.; 50 lbs., $1.75; 100 lbs., $3.25; 200 lbs., $6.00; per ton (2,000 lbs.), $50.00

SHEEP MANURE, "RAM'S HEAD BRAND"

This is a pure Natural Manure, and a most nutritious food for plants. Its effect is immediate; much more lasting and healthy than guano. It is the best of all manures for mixing with the soil for greenhouse plants —one part of manure to six parts soil. Strewn over and dug into the vegetable garden, or placed directly in drills or hills, it promotes a rapid, steady growth until maturity. It makes the richest, safest and quickest Liquid Manure. For use in liquid form, 1 pound to 5 gallons of water will make a liquid of a strength which can be used with safety daily if necessary. In bags of 100 pounds each, $2.00; ¼ ton, 5 bags, $9.00; per ton, 20 bags, $30.00. In packages of 2, 4 and 10 pounds, 15 cts., 25 cts., and 50 cts. each.

COMPRESSED SHEEP MANURE

Used chiefly for making liquid manure. In bags of 100 lbs. each, $2.00; ¼ ton, 5 bags, $9.00; per ton, 20 bags, $30.00.

ASHES, UNLEACHED (Canada Hardwood)

Contain all fertilizing elements except nitrogen. They drive away insects, and are indispensable for all crops requiring potash. They are very beneficial for garden and field crops, and are of high value for cabbage, potatoes, onions, strawberries, fruit trees, grass-lands and lawns. Apply 1 to 2 tons per acre, as one heavy application will help much more than the same quantity would applied in fractions. Price, bag, about 100 lbs., $1.50; per ton (2,000 lbs.) in bags, $22.00

NITRATE OF SODA

This is valuable solely for the nitrogen it contains, equal to 20 per cent. of ammonia. It is very quick in action and hastens the maturity of crops fully two weeks. Being extremely soluble, it should not be applied until the plants are above ground, when 100 to 500 pounds per acre, mixed with wood ashes or land plaster, for convenience in applying, are generally used. Price per 5 lb. package, 40 cts.; 10 lb. package, 60 cts.; per 100 lbs., $5.00.

CRUSHED, OR COARSE RAW BONE

Excellent for graperies, etc., where more permanent results may be obtained than from use of fine bone. 100 lbs., $2.75; 200 lbs., $5.00.

PURE FINE RAW GROUND BONE

This is a very pure, finely pulverized form of ground bone, specially prepared for rose culture. It is well adapted for mixing with soil for potting purposes, in the proportions of one part bone to fifty of soil. 2 lbs., 15 cts.; 4 lbs., 25 cts.; 10 lbs., 50 cts.; 50 lbs., $1.50; 100 lbs., $2.50; bag (200 lbs.), $4.50; ton, $38.00.

CLAY'S FERTILIZER

We have been appointed sole agents for this valuable English manure, which is constantly increasing in popularity. It is undoubtedly one of the best for all purposes, either in greenhouse or garden, and we believe its high reputation is well deserved. It is productive and lasting, and notwithstanding its apparently high price, it is quite economical. Per ½ cwt. (56 lbs), $4.00; cwt. (112 lbs.), $7.00.

MAPES' CELEBRATED FERTILIZERS

The highest grade commercial fertilizers in the United States, their basis being bone, no rock being used in their composition. All fertilizing constituents, nitrogen, potash and phosphoric acid, are strictly high grade and soluble.

Potato Manure. For Irish and sweet potatoes, also for asparagus, early vegetables, tomatoes, sugar beets, fruits and sorghum. Use three bags per acre. Per bag (200 lbs.), $4.50; per ton, $40.00.

"Target Brand" Scale Destroyer. This preparation has been compounded with a view to give the fruit-grower, and others who desire to spray, every possible advantage possessed in soluble oils. In making T. B. S. D. there is not one drop of crude oil used, consequently it possesses none of the dangerous qualities of the latter.

Target Brand Scale Destroyer dilutes readily in any water, has a milky appearance and is positively neutral. It cannot penetrate the tree, nor can it injure the most delicate growth. It kills the scale by suffocation and not by penetration, as in the latter process the tree suffers.

It has no caustic action, will not injure hands, clothing, eyes, body or spraying apparatus, and the results are evident 4 to 6 weeks after its application. In dilution it is very economical—covering just one-third more space when applied than lime, sulphur and salt, and it likewise covers more space than most other oil preparations.

Dilution: In winter and early spring 1 gallon T. B. Scale Destroyer to 20 gallons of water; late spring 1 gallon T. B. Scale Destroyer to 25 gallons of water; summer 1 gallon T. B. Scale Destroyer to 40 gallons of water.

Tobacco Soap (Rose Brand). Makes an excellent wash for plants and trees infested with green fly, lice and eggs of insects. Dissolve 2 oz. in a gallon of water. ½-lb. tins 25 cts.
